

Release Notes

The build date is shown in the *About* window selected from the *Help* menu.

Date	Type	Description
May 25th, 2008	Fix	Improved radio communications thread blocking by adding a no-op request. Previously the blocking routine was not working correctly so a current read/write to the radio could be interrupted causing timeouts and possible lockups.
May 17th, 2008	Add	K3 added AM and FM to modes dropdown button.
May 14th, 2008	Fix	TS-2000 memory channel names now correctly limited to 7 characters even though the programming info for MW states that 8 characters is the maximum.
